

SRI HARSHINI KANDI

GCP Data Engineer | BigQuery | Cloud Composer | Airflow | GCS | Dataflow | SQL | Python

Chicago, IL | sriharshiniraok@gmail.com | +1 (331) 701-1913

PROFESSIONAL SUMMARY

GCP-focused Data Engineer with 3.5+ years of experience supporting cloud data platforms, data lakes, ETL/ELT pipelines, SQL/Python development, data quality, reconciliation, metadata documentation, Agile delivery, and production-style issue resolution. Experienced in building inbound and outbound data pipelines, preparing governed analytics-ready datasets, tuning SQL logic, documenting pipeline design/support strategy, and collaborating with business, IT, analyst, and data science teams. Strong Computer Science foundation with project-based exposure to Google Cloud Platform services including BigQuery, Cloud Composer, Google Cloud Storage, Dataflow, Datastream, Airflow DAGs/operators, data lineage, operational metadata, and healthcare/education-style reporting data products.

TECHNICAL SKILLS

GCP & Cloud Data	Google Cloud Platform (GCP) Concepts, BigQuery, Google Cloud Storage (GCS), Cloud Composer, Apache Airflow, Dataflow Concepts, Datastream Concepts, Pub/Sub Concepts, Cloud Data Lakes, Cloud Data Platforms, Azure Data Factory, AWS S3
Data Engineering	ETL/ELT, Inbound/Outbound Pipelines, Data Ingestion, Data Transformation, Batch Processing, Incremental Loads, Data Quality Remediation, Root-Cause Analysis, Pipeline Monitoring, Operational Metadata, Data Lineage
Programming & SQL	SQL, T-SQL, Python, PySpark, Spark SQL, Java, Shell Scripting, Bash, PowerShell, JSON, XML, REST APIs, Reusable Scripts, Query Tuning, Performance Optimization
Workflow & DevOps	Apache Airflow DAGs, Airflow Operators Concepts, Cloud Composer Concepts, Git, GitHub, Jira, Agile/Scrum, Sprint Tasks, Defect Tracking, Testing Support, Production Support Documentation
Databases & Analytics	BigQuery Concepts, SQL Server, MySQL, PostgreSQL, Snowflake Concepts, Azure SQL Database, Data Warehouses, Data Marts, Power BI, Tableau Concepts, Excel
Modeling & Governance	Data Modeling, Star Schema, Snowflake Schema, Fact Tables, Dimension Tables, Metadata Management, Data Lineage Capture, Data Quality Rules, Audit Logging, RBAC, Access Control, Documentation

PROFESSIONAL EXPERIENCE

Tuve Group Telangana, India Junior GCP / Cloud Data Engineer	Jun 2021 - Dec 2023
- Supported cloud data platform, data lake, ETL/ELT, SQL/Python development, data validation, reconciliation, and reporting dataset preparation for business applications and downstream analytics users. - Developed SQL queries, joins, views, stored procedures, reusable scripts, and optimized extraction logic across SQL Server, MySQL, and PostgreSQL sources for reporting, analytics, and operational requirements. - Assisted in building inbound and outbound data pipelines to ingest, update, transform, and deliver structured and semi-structured data from relational databases, flat files, Excel, CSV, JSON, XML-style extracts, and application exports. - Applied Python, SQL, and PySpark/Spark concepts to cleanse, standardize, join, aggregate, deduplicate, and prepare datasets for analytical reporting, stakeholder dashboards, and data science-style consumption. - Prepared GCP-style analytics datasets by aligning ingestion, storage, transformation, orchestration, and validation patterns with BigQuery, GCS, Cloud Composer, Airflow, Dataflow, and Datastream concepts. - Supported Airflow-style workflow management concepts by documenting DAG steps, dependency logic, scheduling assumptions, operator patterns, retry handling, monitoring checkpoints, and failure remediation notes. - Implemented data quality controls including duplicate checks, null validations, schema checks, data type checks, format correction, record-count validation, aggregate balancing, exception reporting, and root-cause analysis. - Prepared data quality remediation notes and collaborated with application teams, QA teams, analysts, and business users to identify upstream data issues and recommend repeatable fixes at the source. - Captured and documented source-to-target mappings, source fields, target structures, transformation rules, validation scenarios, pipeline run notes, operational metadata, and lineage-style data flow details. - Created and maintained staging tables, lookup tables, reporting tables, fact/dimension datasets, and analytics-ready outputs used by analysts, business stakeholders, and downstream applications. - Developed Python automation scripts for file handling, JSON/CSV parsing, data formatting, recurring validation checks, exception reporting, repetitive data preparation, and pipeline support activities. - Supported query tuning and performance review by analyzing joins, filters, aggregation logic, reusable SQL patterns, table relationships, and execution behavior to improve reporting reliability and scalability. - Troubleshoot ETL failures, SQL errors, performance issues, file load failures, data mismatches, and downstream reporting defects through root-cause analysis of logs, queries, source data patterns, and table relationships. - Used Git, Jira, and Agile practices for sprint tasks, backlog support, defect tracking, testing support, change coordination, documentation, and production-style issue resolution.	

Environment: GCP Concepts, BigQuery Concepts, GCS Concepts, Cloud Composer Concepts, Apache Airflow DAGs/Operators Concepts, Dataflow Concepts, Datastream Concepts, Pub/Sub Concepts, SQL Server, MySQL, PostgreSQL, SQL, T-SQL, Python, PySpark/Spark Concepts, JSON, CSV, ETL/ELT, Data Warehousing, Power BI, Git, Jira, Agile.

Lewis University Romeoville, IL Technical Support Intern / Student Technical Assistant	Jul 2024 - Jun 2025
- Worked part-time while pursuing an M.S. in Computer Science, supporting university technology operations, internal reporting, data support tasks, application troubleshooting, and user-facing assistance. - Developed SQL queries and Python/Excel workflows to retrieve, validate, reconcile, and analyze operational datasets for audits, enrollment tracking, administrative reporting, and departmental requests. - Prepared structured datasets from Excel files, CSV files, database tables, and system exports for dashboards, monitoring reports, operational extracts, reconciliation, and healthcare-education-style academic reporting. - Created SQL, Python, and Excel-based validation checks to identify missing values, duplicate records, inconsistent formats, incorrect field values, access-related discrepancies, and data quality issues before reporting use. - Automated recurring data preparation and reporting support tasks using SQL, Python, and Excel workflows to reduce manual effort, improve consistency, and support repeatable operations. - Collaborated with IT staff, application users, and support teams to troubleshoot incidents, resolve data discrepancies, verify permissions, support UAT-style checks, and improve long-term documentation. - Documented troubleshooting procedures, SOPs, data handling steps, validation notes, access support processes, recurring issue fixes, and knowledge-base notes for production-style support.	

Environment: SQL, Python, Excel, CSV, JSON, Database Systems, Reporting Data, Windows, Helpdesk Tools, University Systems, Data Validation, Data Cleaning, Documentation, Technical Support.

PROJECT EXPERIENCE

GCP Data Lake and BigQuery Analytics Pipeline | Academic / Project Experience

- Designed a GCP-oriented data lake and analytics pipeline concept using Google Cloud Storage, BigQuery, Cloud Composer, Apache Airflow, Dataflow, Datastream concepts, SQL, Python, and governed medallion-style layers.
- Created inbound and outbound pipeline designs to ingest raw data, apply transformation logic, validate critical data elements, and publish curated datasets for BI, analyst, and data science consumption.
- Developed SQL and Python transformation logic to clean, join, aggregate, deduplicate, and validate datasets before loading analytics-ready structures into BigQuery-style warehouse tables.
- Documented pipeline architecture, data flow diagrams, source-to-target mappings, lineage notes, operational metadata, support strategy, monitoring checkpoints, and data quality remediation plans.
- Explored Airflow DAG/operator concepts for scheduling, dependency management, pipeline retries, failure alerts, orchestration, and repeatable cloud workflow management.

Student Success and Healthcare Education Reporting Data Mart | Academic / Project Experience

- Built dimensional models with fact and dimension tables to support student, course, department, operational, KPI reporting, and business analysis use cases.
- Designed star schema structures and developed SQL views, aggregation logic, validation queries, and reporting layers for dashboard-ready datasets and business insights.
- Performed source-to-target reconciliation between source data and reporting tables to confirm accuracy, completeness, data quality, and reliability of critical reporting metrics.

EDUCATION

Lewis University | Romeoville, IL - Master's of Science in Computer Science | Jan 2024 - Dec 2025

Vignan's Institute of Management and Technology for Women | Telangana, India - Bachelor of Technology in Information Technology | Aug 2019 - Jul 2023

CERTIFICATIONS

Google Cloud Professional Data Engineer - Planned | Google Cloud Digital Leader - Planned | Microsoft Azure Data Engineer Associate - In Progress / Planned | AWS Cloud Practitioner - In Progress / Planned | Databricks Lakehouse Fundamentals - In Progress / Planned
